

# Post Install (New Member Form)

This is a template form to print and leave with members with their WiFi information, install/node number and other details. It also provides links to our support channels if they have any issues.

Our Mesh Guide also includes a page to write down this information. Otherwise writing the WiFi information on a piece of paper is also acceptable.

Remember to write down the administrator (management) password for WiFi router. This is important if the member needs to change their WiFi password later. (Most installers have a standard password that they use, but it's helpful to have a record so we don't need to reset the router if we don't know it)
