

Environments

We run several instances of MeshDB. This is so that we can do development and testing, gate our changes, and ensure the quality of the code and configurations we ship.

Find our infrastructure at <https://github.com/nycmeshnet/k8s-infra>

Production (prod1)

<https://db.mesh.nycmesh.net>

Our main instance.

Preproduction (gamma)

Planned instance. Does not currently exist.

Used to run tests against before changes go out. Designed to be as close to prod as possible.

Development (dev3)

<https://devdb.mesh.nycmesh.net>

Development instance. Probably broken a lot, used to test infrastructure changes and develop new features. Does not represent prod 1:1.
