

# SQL Explorer (formerly PGAdmin)

**SQL Explorer**

New Query Playground Logs Favorites

## Playground

The playground is for experimenting and writing ad-hoc queries. By default, nothing you do here will be saved.

altitude	FloatField
notes	TextField
panoramas	Unknown
id	UUIDField
primary_node_id	UUIDField

**meshapi\_building\_nodes**

id	BigAutoField
building_id	UUIDField
node_id	UUIDField

For more in depth access to MeshDB's database, you can use the SQL Explorer tool to perform complex queries and operations on the the MeshDB dataset. The tool is read-only, however queries can be stored for later use by yourself or others.

Try it out at <https://db.nycmesh.net/explorer/play/>.

You can use it by logging in with your MeshDB account! If you don't have access to the tool or need a Mesh DB account, reach out in [#meshdb](#) on slack.
